Proximity Imaging Metrics Project

Solution:
Design an aftermarket Proximity Sensor System which includes Blind Spot Monitoring, Rear Proximity Sensors, a Back Up Camera with an Android App UI/UX. Make User installation Simple and easy.

Problem:
Around 75% of vehicles today lack Back Up Cameras, and an even greater amount of vehicles lack Blind Spot Monitoring. Back Up Cameras have been predicted by the Department of Transportation to prevent 58-69 deaths per year. According to a similar study by the Department of Transportation, Blind Spot Monitoring would prevent 300 deaths a year.
