

# Team 7: A.I.R.

Peter Kapteyn, Isaac Rai, Melissa Van Baren, and Daniel Wartella

Our project is to make a robot that can autonomously play air hockey with a human opponent. This will enable single player air hockey play. The robot will have to be easily portable and robust, with great ease of installation and removal to and from air hockey tables. After the prototype is made, the team will implement additional features such as difficulty levels and a scoring system.
