

Team 13: Pork Chops

The Problem

South Olive Christian School currently makes thousands of pigs in a blanket by hand every month as a year-round fundraiser. Current demand outpaces their production capabilities, and they need an alternative method to increase output.

The Solution

Our team is partnering with South Olive Christian School to design and make an automated machine to produce their pigs in a blanket. The dough and sausage used in this machine will follow the same recipe that the school has used for over fifty years.
