

TEAM 6: [L]across[e] the Horizon

Goal

The goal of Team [L]across[e] the Horizon is to design a device (ReLAX™) that can accurately shoot a lacrosse ball into differing locations at various speeds. This device will be easily portable and will allow for expansion in the accessibility of the sport as well as the advancement of Lacrosse.

Overview

The machine will function as a device to warm up a Lacrosse goalie more accurately than a person can. This device has multiple marketable opportunities as it could be used in multiple aspects of lacrosse, for example, for a passer. The customers for this project are Coach Blake Boehm and Coach Dave Hoger of the Women's and Men's Calvin Lacrosse teams, respectively. With all this in mind, this team wishes to make this device with sustainable power and materials as well as make it accessible to all.
