

2019 McGregor Faculty Mentor Expectations and Responsibilities

Be Present for the Duration of the Program

The McGregor research term is June 3–August 2. Mentors are expected to be in Grand Rapids for most of the summer term. Students and faculty will have a one-week mandated break in the middle of the term (July 1–July 5). Past experience and student feedback indicates that the most successful students in the McGregor program are those who have a mid-summer break. Please limit additional time away from Grand Rapids to no more than one week over the 9-week period (June–beginning of August), and require your McGregor Fellow to do the same. While we want to be flexible, the benefits of the program are difficult to achieve with frequent absences on the part of faculty mentors or students.

Establish Clear Expectations of Fellow

Outline a clear set of expectations for your fellow at the beginning of the summer. Based on past evaluations and feedback, fellows want more clarity and assistance from faculty than they usually receive. Mentors are expected to develop a timetable for the summer during the first meeting with their fellow.

Hold Weekly Meetings with Fellow

It is difficult to mentor someone without regular interaction. At least one weekly face-to-face meeting is the minimum expectation. Students' satisfaction and sense of accomplishment depends on their mentoring experience with faculty. Those who develop strong working relationships with their faculty mentors are usually happiest and tend to be the most productive. Whichever mentoring approach one chooses, past students' basic measure of success was whether they could characterize their experience as “working *with*” or “working *for*” a faculty member.

Require Fellow to Attend Weekly Labs

McGregor Fellows participate in a required weekly meeting. Mentors will have advance notice of the summer schedule and are required to build this meeting into their student's workweek. An important component of these meetings are faculty mentor presentations of their scholarly journey (30 minutes, followed by questions and answers). The intent of these talks is to help students contemplate their vocation as an intellectual, within or beyond the academy.

Approve and Account for Fellow's Time

Mentors approve their fellow's time sheets. Students are responsible to account for how they use their time each week. Mentors are responsible to monitor fellows' activities on a weekly basis. If there is reason to believe that a fellow is not working regular full-time hours, the McGregor Director should be notified. Concerns about a fellow's efficiency (or lack thereof) should also be addressed. A mentor and fellow may arrange to begin research earlier or later, and perhaps extend into August. Programming and the Director's support, however, are limited to the summer period noted above. Students are required to be present at meetings the entire program period regardless of the work arrangement made with their mentor. Students may not work more than 40 hours per week, no exceptions.

Attend Research Presentations

Fellows will present their work at the end of the term during the week of July 29. Mentors are required to attend the entirety of this session as a condition of receiving the McGregor grant. Student feedback has indicated disappointment at a previous lack of faculty participation in this meeting. In fact, former fellows communicated that they felt undervalued and disrespected by the absence of faculty mentors. Our goal is to foster a research community through the McGregor program, and mentor attendance is crucial to achieving that goal.

Evaluate Fellow

Feedback on student performance should occur on a weekly basis. At the end of the summer, mentors are required to complete an evaluation of their student's performance. This process is crucial to providing the student with benefits from the program that are tangible and helpful as they pursue future careers.
