

FYRES Coordinator 2017-2018

Carolyn Lindemulder

Carolyn Lindemulder is a junior from Santa Clara, California. She is studying biology, with minors in geography and data science. She took the FYRES class as a freshman and studied the environmental factors that affect Pitcher's thistle, a federally threatened plant that grows on the coastal dunes around the Great Lakes. Last year, she returned to the class as a mentor and studied the characteristics of the slipface of a large parabolic dune in Hoffmaster State Park. She is excited to return to FYRES for a third year as the FYRES coordinator!
